FOREWORD

Agriculture plays a vital role in India's economy. About 55% of the total workforce is engaged in agricultural and allied sector activities, which accounts for 17.1% of the country's Gross Value Added (GVA) for the year 2017-18 (at current prices). In the North Eastern Region, about three-fourths of population predominantly depends on agriculture and other allied activities. While the share of agriculture and the primary sector to the country's GVA has been coming down, this share is still very high in NER.

As per the Land Utilisation Statistics (2014-15), out of total Cropped Area of 19.84 crore hectares in India, Gross Irrigated Area is about 9.65 crore hectare constituting 49% of total cropped area. In comparison, the states in the North Eastern Region of India (NER) have lower percentages of Gross Irrigated Area, ranging from as low as 9% in Assam and Sikkim to 37% in Meghalaya.

In India, new records are being established in the agriculture sector. India's foodgrain production for the 2016-17 is achieved at record 275.11 million tonnes, which is over 4% higher than the previous record production achieved in the country during 2013-14. In the North Eastern Region of India (NER), production of foodgrains is highest in Assam with 4.95 million tonnes followed by Tripura with production of 0.86 million tonnes.

This "NEDFi Databank Journal" on Agricultural Sector, with special reference to NER, contains two issues viz. Irrigation and Crop Production.

We hope that the data/information provided in this Journal will be useful to our readers and all the stakeholders in this Sector. We also look forward to feedback and suggestions for further improvement.

A handwritten signature in black ink, appearing to read 'B. P. Muktieh'.
